

ROV Water Blaster

High Pressure Water Jet Fitted to ROV

The Dive Works Water Blaster supplies a high pressure jet of sea water that can be used to clean subsea equipment. The ROV supplies hydraulic fluid to the unit, which drives the reciprocating pump to deliver sea water at an intensified pressure. A cleaning lance is provided with the pump that the ROV uses with its seven function arm to clean, as required.

Features

- Easily fitted onto ROV
- Uses filtered sea water as a supply
- High Pressure – High Flow output
- Supplied with cleaning lance and 3m hose
- Can be customised to suit
